#### Interpreting your Test Result

The USEPA states that for test results in this range (less than 4 pCi/L) you do not need to conduct radon mitigation at this time. However, if you make any structural changes or start to use a lower level of the building more frequently you should test again.

- No tampering was observed during the radon test.

The subject home described has been tested for the presence of radon gas according to US EPA short-term testing protocols. The test and analysis have been performed to comply with EPA's *Home Buyer's and Seller's Guide to Radon*. This report represents the average radon concentration at the time of sampling and at the specific location in the building. However, it must be noted that radon concentrations will vary from day to day and from season to season.
